

How to Update MyChron5 Firmware and Software

Firmware updates should be done regularly as these updates are for new options for your MyChron5 (M5) and enhance the operation of your MyChron5 product.

Please ensure all screensavers and power saving options are disabled on your PC before attempting firmware and software updates.

Please ensure that the M5 battery is fully charged before attempting any firmware and software updates.

Connect your PC to the Internet

Open Race Studio 3 (RS3)

At the top right there is a blue cloud icon

Click on the cloud - this will now show the updates available

Ensure only RS3 and MyChron5 are ticked (untick any other options)

Click on the download tab

This will now download the updates for software and firmware to your PC

Once downloaded, RS3 will ask to be installed, yes to install RS3.

Once installed and completed, disconnect your Wi-Fi connection to the internet if applicable.

Turn on your M5

Go to Wi-Fi icon in M5 menu

Select auto for Wi-Fi mode

Exit to main screen

Open RS3

At top right click on Wi-Fi icon

Click on your M5 serial number – this will connect your M5

Click on Firmup tab and a new window will open

Click on Update device toversion (This may take several minutes – do not turn off M5 or disconnect battery during this process)

Your M5 serial number will reappear in the update box once it has completed updating

You can then exit the update window

M5 is now updated and ready for use

AiM SportSystems Pty Ltd and its representatives are not responsible for the incorrect procedure of firmware updates that may leave the MyChron5 unusable.
