How to plug a GPS09 to SmartyCam HD /GP HD?

Question:

How to plug a standard GPS module (i.e. GPS09) to a standalone SmartyCam HD / GP HD (until vers 2.1)?

Answer:

SmartyCam HD / GP HD (until vers 2.1) were designed to work with dedicated SmartyCam GPS modules, in particular when the camera was used in standalone. This GPS version is no longer available, thus users requiring to plug an AiM GPS module directly to their SmartyCam, shall use a standard GPS module and a specific 2 port DataHub, properly designed for this layout.

This **SmartyCam/GPS DataHub (part n. X08HB2GK3)** will host the GPS module and the SmartyCam CAN cable on its two ports; the DataHub will also provide an external 12V cable, to be connected to an external power supply, mandatory for this kind of use.

Being a modified version, this **SmartyCam/GPS DataHub** will not offer the possibility to connect to an existing AiM datalogger, which in case will manage the GPS and the SmartyCam as usual.

A standard two port DataHub will not work for this purpose.
