Power source

Low power mode – battery consumption

Question:
Why does my Solo2/Solo2 DL drain the battery in one/two days, even if the device is turned off?

Answer:
Starting from firmware version **02.22.81**, Solo2/Solo2 DL the low power mode management has been corrected: keeping the firmware updated to this version (or newer), the device will show a correct battery consumption.

It is possible to execute the firmup through the proper section of Race Studio 3 (cloud icon; top right corner), after the system has been connected to the PC via Wi-Fi.
