Wi-Fi

VMware settings

Question

I found the Wi-Fi Configuration Guide on the AiM website. It reports network settings in the Parallels virtualized Windows environment, but I'd like to use VMware Fusion as my Windows virtualizer. Can I use VMware Fusion as my virtualizer? And, how can I configure the network in the VMware Fusion Windows-environment?

Answer

Yes, you can also use VMware Fusion as your Windows virtualizer. Make sure that you set the network adapter as "Bridged" under the "Network connection" section on the Mac side beforehand'.
